*Chicken bones have quite high nutritional content and are beneficial for human growth, because they are rich in calcium and phosphorus. Chicken bones are usually thrown away and not used. The agro-industry managed by the Anggrek Women Farmers Group (KWT) whose address is Cihurip Village, Bungursari District, Tasikmalaya City, has made a new innovation in utilizing chicken bones by processing them into chicken bone crackers. The aim of this research is to determine the production process of chicken bone crackers, analyze the amount of added value and profits for entrepreneurs from processing chicken bones into chicken bone crackers. The research method uses a case study with the location taken purposively. The analytical tool used is the hayami method of added value analysis. The research results show that the processing of chicken bone crackers starts from washing, softening, grinding, making dough, steaming, cutting, drying, frying and packaging. The added value of chicken bone crackers is Rp157.500,00 per kilogram with a value added ratio of 63 percent with an entrepreneur's profit of 59,89 percent*
