This study aims to analyze the effect of international rubber prices, real GDP of export destination countries and the amount of Indonesian rubber production on Indonesian rubber exports. The analytical tool in this study uses panel data regression methods and uses testing (t test and F test). The conclusion of this study is that international rubber prices, Indonesian rubber production are not significantly positive correlation and real GDP of destination countries are significantly positive correlated to Indonesia's rubber exports. Together with international rubber prices, the real GDP of destination countries and the amount of Indonesia's natural rubber production affect Indonesia's rubber exports.

Keywords: international rubber prices, destination real GDP, Indonesian natural rubber production, natural rubber exports
