The purpose of this study was to determine and analyze the effect of recruitment and selection of employees in the general administration of Jasa Kartini Hospital, Tasikmalaya City and its effect on employee performance, either simultaneously or partially. This research model uses a survey method. Data collection techniques were carried out by distributing questionnaires to 73 employees of the General Administration of the Jasa Kartini Hospital, Tasikmalaya City. The data analysis technique uses Path Analysis. Based on the results of the study, it is known that recruitment and selection simultaneously affect employee performance and partially. Both recruitment and selection have a significant effect on employee performance. From the results of this study, researchers suggest that companies can improve the recruitment, selection and performance of employees so that they can have a positive impact and achieve company goals in the future.
