*This study aims to determine the effects of the Human Development Index (HDI), Inflation, and Unemployment on Economic Growth in Southeast Asia. The research method used in this study is a quantitative method. The type of data used in this study is secondary data obtained from the publication of the United Nation Development Programme (UNDP), the World Bank website, and Badan Pusat Statistik (BPS). The analysis technique used in this research is panel regression. The result of this study indicate that HDI, Inflation, and Unemployment together have a significant effect on Economic Growth in Southeast Asia. And HDI has a positive significant effect, while Inflation and Unemployment have negative significant effect on Economic Growth. In this study, it is hoped that the management of HDI, Inflation, and Unemployment can increase Economic Growth.*

**Keyword** : Economic Growth, Human Development Index, Inflation, Unemployment
