*This research aims to determine the effect of exports, foreign debt, exchange rates and Covid-19 partially and together on economic growth in Indonesia in 2007-2021. The method used is multiple linear regression analysis using E-views 10 software. This research uses a quantitative descriptive method with time series data types. The result of this study indicates that partially, export has a positive relationship and significant effect and the exchange rate has a positive relationship and has no significant effect. Meanwhile, the foreign debt and Covid-19 have a negative relationship and have significant effect on economic growth in Indonesia in 2007-2021. Taken together, exports, foreign debt, exchange rates, and Covid-19 have had a significant effect on economic growth in Indonesia in 2007-2021.*

*Keywords: Economic Growth Rate, Exports, Foreign Debt, Exchange Rates, and Covid-19.*
