The purpose of writing this final project is to find out the webform-based Real Time Gross Settlement (RTGS) mechanism at PT Bank Syariah Indonesia Garut Branch Office. The data collection methods used were library research, in-depth interviews, field studies and direct observation. The results of the study show that the webform-based Real Time Gross Settlement (RTGS) is a practical, fast, efficient, safe and reliable interbank fund transfer facility to ensure final settlement gross, settlement, real time, final and irrevocable. There are several obstacles in the webform-based Real Time Gross Settlement (RTGS) mechanism at PT Bank Syariah Indonesia Garut Branch Office so that banks have to improve and enhance the webform features. The solution that can be taken to overcome these obstacles is to improve the webform features and provide other options such as cash deposit slips for elderly customers and helping customers to operate webforms and writers paying attention to detailed data so that the data written by customers is not mistaken.

Keyword: mechanism, transaction, Real Time Gross Settlement (RTGS), webform
