

ABSTRACT

*Anggi Fuja Sahyana. 2022. **THE EFFECT OF MOTHERS PARTICIPATION IN THE BINA KELUARGA BALITA ON PARENTING SKILLS IN THE FAMILY (STUDY ON THE PARTICIPANTS OF THE BKB MELATI III PROGRAM IN CIPARI VILLAGE, SUMEDANG REGENCY).** Department of Community Education. Faculty of Teacher Training and Education. Siliwangi University. Tasikmalaya.*

Mothers who predominantly live in rural areas are faced with limited understanding of parenting which leads to the emergence of conservative views on parenting, so many mothers commit physical and psychological violence when caring for children in the family. In an effort to improve the capacity and quality of parenting skills, the government encourages mothers to participate in the Bina Keluarga Balita program. This study aims to analyze the effect of maternal participation in the Bina Keluarga Balita program on the parenting skills of mothers of BKB Melati III assisted participants in Cipari Village, Sumedang Regency. The research method used is correlational with a quantitative approach. The sampling technique used is a total sampling technique by taking the entire population, which is as many as 58 people. The results of the hypothesis test showed that the calculated value of the variable of maternal participation in the Bina Keluarga Balita program had a value of 8.233 > a table value of 2.00324. While the probability value is 0.000 < alpha 0.05 or 5%, so it can be concluded that H_0 is rejected and H_1 is accepted. The value of the coefficient on the independent variable is 0.740 with a positive sign against the dependent variable. This means that the higher the participation of mothers in the Bina Keluarga Balita program, the higher the level of parenting skills. Then the results of the determination analysis showed that maternal participation in the Bina Keluarga Balita program had an effect of 54.8% on parenting skills, while the remaining 45.2% was the contribution of other variables that were not included in the model in this study. Meanwhile, the correlation results showed that maternal participation with parenting skills in the family had a strong relationship. Thus, based on the results of the analysis, it can be concluded that mothers' participation in the Bina Keluarga Balita Program has a positive and significant effect on parenting skills

Keywords: Bina Keluarga Balita, Parenting Skills, Mother Participation.
