Dear Author,

We have reached a decision regarding your submission to JOIV, your article with title

**" Evaluating Web Scraping Performance Using XPath, CSS Selector, Regular Expression And HTML DOM With Multiprocessing Technical Applications "**

Our decision is: Revisions Required

**The word number in abstract should be within 230-250 words and consists of objectives, materials, method, results, and implication for further research.**

**All the citations should be listed in the references. It is expected that the citations are at least 30 sources, and 70% are the publication within 2017-2022**

Review 2

Overall evaluation 1: (weak accept)

in the intro, the problem to be discussed is not clearly visible. The suggestion is to clarify the problems you want to discuss in the performance section.

in the experimental section, there are two sub-experiments, namely single process and multi process. But it is not explained the difference between the two and why to use experiments using these techniques.

Overall, I don't get a solid reason why this experiment was carried out and the implications of the findings.

Please send revision through this email with Subject "[Title] revision" as soon as possible.

Best regards
